AFIS-Thematic Committee « Ingénierie Système Durable & Responsable » (ISDR)

- Claude POURCEL (Lead of TC ISDR)
- Amaury SOUBEYRAN (co-lead TC ISDR)
- Anne SIGOGNE (co-lead TC ISDR)
- + 5 to 10 participants to activities and products

Objectives of the TC ISDR

This thematic committee was created in June 2023 as part of a new AFIS organization, it is an extension of the ISDR Mission which began at the end of 2020

With the objective to:

- Identify and host projects and initiatives promoting and supporting Sustainable and Responsible developments through appropriately tailored Systems Engineering
- Spread a culture for sustainability and responsibility account in system development
- Connect with similar and/or complementary initiatives in other organisations
- Ultimately support UN goals by an SE approach combining and balancing Environmental,
 Societal and Economic objectives through a strategic planning of Enterprises transformation starting e.g. with an initial SWOT or PESTEL status

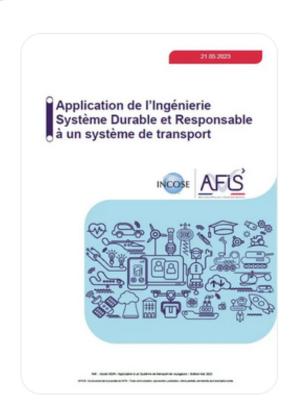

Achievements of the TC ISDR

- List of events organized by the mission:
 - AFIS Forum 2020: Workshop / Engineering of Sustainable and Responsible Systems
 - Webinar 2021: SE standards & Collaborative Engineering: opportunities for ISDR?
 - Industry Academy Meetings 2022: Contribution of system engineering to the circular economy and the product life cycle
 - > JT #36 (2022): "Sustainable and Responsible Systems Engineering: an essential issue?"
 - Afterwork South Chapter 2023: Presentation of the work of the ISDR mission
 - Presentation to (future) WG Sustainability at IW2024
 - Animation of panel sessions at AFIS Congress 2024 and 2025
- Most important realizations yet (in French):
 - Guide "Application of Sustainable and Responsible System Engineering to a passenger transport system"
 - > Study "PRODENER: Sustainable and responsible electrical energy production process"
 - > Series of associated technical notes

The ISDR guide to passenger transport in a territory

Volume 1,(2023) available for download on AFIS website

Volume 2 (writing on-going) for end 2024

A guide for diverse stakeholders...

- Who will have to understand the ISDR approach and who will be able to instill the dynamic
- Who will have to implement the ISDR approach
- Who will induce changes by imposing constraints or by promoting change and collaboration
- Who will have to be part of the ISDR approach to explain their needs
- Having general expectations, having to fit into the ISDR approach to guarantee the acceptance of projects
- For which it will be necessary to take into account the economic model in the ISDR approach, so that the projects are viable

Fourniture

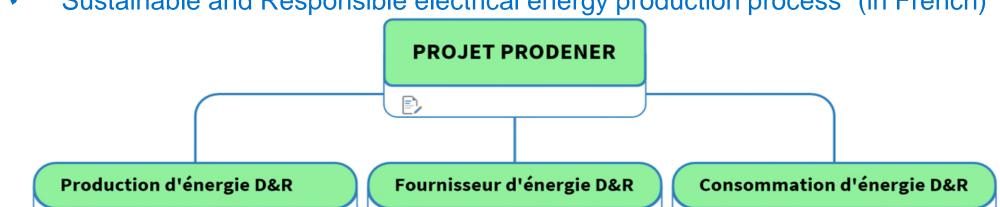

The ISDR project for energy production systems

A project for "eco-modernism"

- Define impacts and guide application of:
 - ✓ Sustainable (and responsible) development;
 - ✓ Circular economy;
 - ✓ Ecodesign;
 - ✓ Value analysis;

...on the strategy of a company for its System Engineering (SE) of an energy production system which meets the criteria of Sustainability and (social) Responsibility

- The participation in the project is organized around 6 people to produce documents intended for publication within AFIS and beyond e.g. in 2024:
 - ✓ "Sustainable and Responsible electrical energy production process" (in French)

Discover, understand and practice the energy transition Tech Note

1. Introduction 2

- a. Definition of the energy transition 2
- b. Objectives of the energy transition 2
- c. Importance and relevance in the current context

2. Describe the Energy Transition 3

- a. History and evolution 3
- b. Benefits of the energy transition 3
- c. Challenges of the energy transition 4
- d. Policies and regulations (e.g.: Energy Transition Law in France) 5

3. Understanding Key Concepts 6

- a. Renewable energy sources (solar, wind, hydraulic, biomass, etc.) 6
- b. Energy storage technologies 6
- c. Smart grids 7
- d. Energy efficiency and demand management 8

4. Methodologies and Tools 9

- a. Life cycle analysis (LCA) of energy systems 9
- b. Environmental impact assessment 9
- c. Resource optimization techniques 10
- d. Modeling and simulation tools 11
- **5. Practice Energy Transition 12**
- a. Implementation Steps 12
- b. Case studies and practical examples 14
- 6. Applications and Innovations 14
- a. Sectors of application (residential, industrial, transport, etc.) 14
- b. Recent innovations and future trends 15
- c. Role of emerging technologies (AI, IoT, etc.) 16

7. References 16

Future topics for the TC ISDR

- Impact of sustainable development on IS standards
- LifeCycle analysis and ISDR
- Value Analysis and ISDR
- Reengineering / Remanufacturing system to become D&R
- Ecodesign and ISDR
- ISDR and circular economy
- Al contribution to ISDR

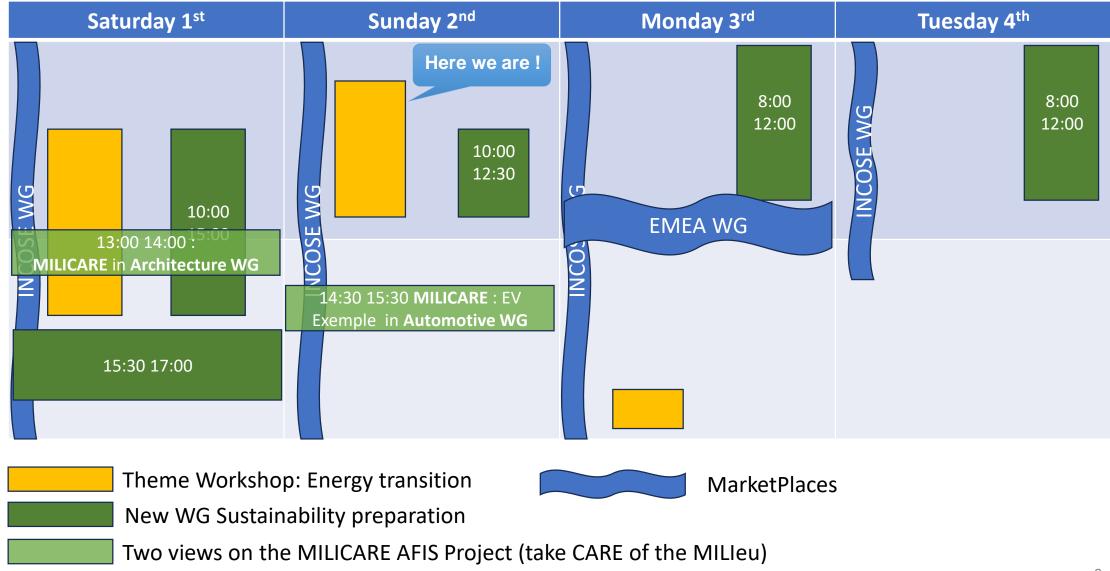

and investigate...

- "Green Technology"
- Artificial Intelligence & Machine Learning
- Biomimetic Design
- Upcoming Standards and Regulations

without forgetting...

- Education and Awareness
- Any Adoption facilitator

QUESTIONS?

Content of the Guide «Application of Systems Engineering for Sustainability to a passengers transport system»

APPENDIX

Guide IS – Présentation du guide

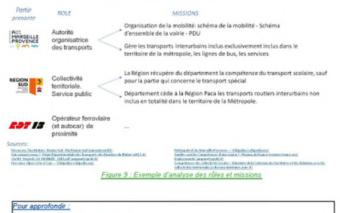

4.2 Attentes des parties prenantes

Comme pour le processus Ingénierie Système générique, mais plus encore dans cet enjeu de développement durable et responsable, il est important de bien comprendre les rôles et missions des parties prenantes. Pour cela :

→ Identifier les rôles et les missions des diverses parties prenantes mais aussi leurs objectifs et leurs finalités (intérêts, valeurs ajoutées recherchées, obligations, sensibilités).

Pour illustration, la figure ci-après identifie les rôles et missions types de quelques parties prenantes, utiles à l'analyse de la problématique du Système de transport de voyageurs dans la métropole Aix-Marseille.

Fiche 02 - Parties prenantes

De manière générale, pour faire de l'Ingénierie Système Durable et Responsable, tenir compte des recommandations suivantes :

- . Recommandation 5: Ne pas oublier dans la recherche des attentes essentielles
 - Les attentes de la Société, liées au développement durable
 - Les attentes issues de la stratégie de développement durable du(des)
 Territoire(s),

Ref. Guide (ISCR / Application a un Bystème de transport de voyageurs / Edition Septembre 2022 APIC G-Ce trouvers del la propriet de (APIC-Tous communation, paroduction, publication, notres partiets, set revotte and automation sude A simplified explanation of ISO 15288 IS processes

 Examples associated with the transport problem in the Aix Marseille Provence metropolis

 Sheets for further study + useful links (standards, publications)

ISDR-type recommendations

Extract from the guide as an example: Analyse missions and activities

Use cases

- > Recommendation 6: As part of the fundamental activity "clearly identify the problem to be addressed", carry out an analysis of the links between the elements studied and the "sustainable development" value criteria:
 - Identify among the value criteria of problems and opportunities, "sustainable and responsible development" value criteria (or in this guide "ISDR") relevant to the project
 - Include the valuation of ISDR criteria in the scenario analysis
 - "How does solving a problem or realizing an opportunity positively or negatively impact an ISDR criterion, degrade or improve environmental, societal and economic results? »

Par exemple voici une liste de scénario types / persona type

Cas de M Alain TELIJAN, qui veut :

- Amener les enfants à l'école
- · Aller au travail
- Aller faire du sport
- Récupérer des colis, faire les courses et passer au pressing

Cas de la famille MALAIN, qui veut

- Partir en voyage et aller à la gare
- Être autonome sur son lieu de voyage

Cas de M URE Jean, livreur qui veut

Livrer des colis d'une zone logistique à M TELIJAN

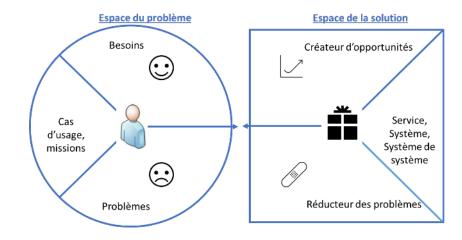

Cas de Mme MEYREGRAND (79 ans), qui veut

- · Se ravitailler
- Se soigner
- Voir ses petits enfants

Cas de Mme LOGISTIC, qui veut

Se ravitailler
