Flourishing Business Canvas v2.1 Full Version

Designed for: SustainaSun

Designed by: Sustainable Together Project Team of International Council on Systems Engineering (INCOSE)

Date of model: July 1, 2035

Today's date: June 23, 2025

Environment

This business is part of the economy, which is created by our society, which in turn is ultimately, utterly and immediately dependent on the environment. These are the vital context for any business – all risks and all opportunities – including yours.

This business is also part of a value constellation of other businesses, organizations, communities, individuals, animals, plants and the environment.

When answering the questions posed by the canvas for your business consider how your answers need to reflect these vital contexts and the other Actors in your value constellation.

Society

Economy

Tree institute at Pau U on social/legal

BIOPHYSICAL STOCKS

What ultimate stocks provide the tangible key Resources that are moved, flow, and / or transformed by this business's critical Activities to achieve its Goals?

What biophysical materials – living and non-living – are required in order to co-create value with your Stakeholders?

Guidance: As per laws of conservation of matter, all materials remain Biophysical Stocks somewhere on our single shared planet irrespective of this business's Activities (past, present and anticipated future)

- The biological Stocks from the LCI

ECOSYSTEM SERVICES

Ecosystem services are processes powered by the sun that use Biophysical Stocks to create flows of benefits humans need: clean water, fresh air, vibrant soil, plant and animal growth etc.

Which flows of these benefits are required by, harmed or improved by this business's Activities?

Example: See World Business Council for Sustainable Development (WBCSD)'s Corporate Ecosystem Service Review v2.0

- The biological Services from the LCI

PROCESS

How, where and with what does this business co-create its value to achieve its Goals?

RESOURCES

What are the key tangible and intangible Resources required in order to execute this business's critical Activities and so achieve its Goals?

- [Materials] See PV-System LCA
- Human Resources and capabilities (how to quantify?)
- Transportation
- Knowledge about PV-Systems - Societal Readiness

PARTNERSHIPS

What formal partnership agreements/ contracts are required by this business?

To which key Resources do these partnership agreements enable this business to gain preferred access? e.g. an agreement to supply raw materials

Which critical Activities do these partnership agreements ensure are undertaken for this business? e.g. an agreem…

- Traditional Grid Provider
- Community (User)
- State / Municipality (financial & political support)
- Nature [Land, River] (Raw Materials, Production)

ACTIVITIES

What critical Activities does this business perform to strive to achieve its Goals?

What critical Activities enable each value co-creation or value co-destruction?

What critical Activities create and deliver each product/service?

- C2C Design
- Subsidiaries [Financial Support]
- Lobbying activity to get the regulation changed
- Reverse logistic to get the materials back
- Ethical Supply Chain
- Leads / Customers acquisition

GOVERNANCE

Which Stakeholders get to make decisions about: which Actors are legitimate Stakeholders, the Goals of this business, its Value Co-creations and its Processes?

What are the Governance arrangements for this business? i.e. which Stakeholders have the power to make decisions about what topics?

- Government (Regulation & Funding)
- Building-Regulations
- Smart Grid [Integration]
- Energy supplier [integration]
- Energy storage [integration]
- Financiers

VALUE

What value is co-created and co-destroyed now and / or in the future between this business and all the Stakeholders involved?

VALUE CO-CREATIONS

What value is co-created with each stakeholder, satisfying the … associated actor, from their perspective (world-view), now and/or in the fu…

Which value co-creations are associated with which Products/Services?

- We use existing space and not use more dedicated surface [Nature]
- Use the structure of the PV-System to for plants [Nature]
- Avoid Bird Collision, Corrosion with nature [Nature]
- goodwill local business communities
- I need an energy supply that has zero environmental (carbon++) footprint full cycle of the solution
- I have space in my house where I can put an 'energy system'
- Somebody who does not have PV sytem yet
- I want to help to stabilize the grid - feed e back into the grid ....
- I am a sustainability conscious home owner and want to updgrade to a more circular - effektif? system - with lower carbon footprint and cheaper to acquire and or maintain ? (becomes irrelevant)
- I want an upgradable systems that evolves with newer features to ensure that I am always having the lowest foot print and cost effective electricity system
- Suppliers in the value chain (Production-as-A-Service, TBD.)

VALUE CO-DESTRUCTIONS

What value is co-destroyed with each stakeholder, hindering the satisfaction of the Needs of the associated actor, from their perspective (world-view), now and/or in the future?

- Traditional Energy providers - cannot or reduced offer of energy
- Manufacturers of tradition PV-Systems (not circular)
- Suppliers for conventional PV - Less Raw Materials
- Sellers of Land for PV-Systems

PRODUCTS / SERVICES

What does this business offer and provide to its customer, client or user Stakeholders that co-creates value with the associated Actors to better meet their Needs?

Which offers do customer, client or user Stakeholders pay the business for, realizing (at least financial) Benefits?

- PV-System [Leasing, we own the materials. Customers must give us the materials back]
- APP for the monitoring, shopping, repair, etc.
- Repair
- How much money is behind the Feedback fee? Is it enough? If not, we need other revenue streams
- Leasing Costs
- as a material resource bank
- (planing) & Mounting
- Upgrade
- Leasing Costs gradually decreasing?
- To compare with actual price 40€ / Month

PEOPLE

Who are all the people involved in this business: the people this business does it to, for and with?

RELATIONSHIPS

What type of Relationships with each stakeholder must be established, cultivated and maintained by this business via its Channels in order for value to be co-created (or co-destroyed)?

Examples: Become aware, build trust/ interest, decision making, co-create value, experience, collaborate/support, co-evolve

- IMPORTANT Build PV-System on a green floor [Nature]
- I need to update my electricity system - or existing PV to a newer one? (More effective at producing electricity, more cost effectives, lower environmental footprint) (becomes irrelevant)
- I do not have money to invest upfront and I want a affordable monthly payment
- I like to be a leader in my community when it comes to energy supply (or least not to be left behind)
- I want to follow and not be left out as being also seen as a sustainable person
- I like the status gain from being perceived as a leader in Sust dev.
- reputational gain in value - cluster

STAKEHOLDERS

How is each actor involved in this business?

What stakeholder roles does each actor take?

Examples: customer, employee, investor, supplier, community, regulator, financier

- Lease Financier
- who do we have to ask to get acess to the grid - ie. Germany - grid providers - lobby this is where we want to look at the interactions with social actors via causal loop and SD diagrams to analyze
- I want a good ROI -
- Internal Stakeholders
- Nature as a stakeholder
- Communities stakeholders

CHANNELS

What Channels will be used by this business to communicate, interact, and to develop the required types of relationship with each stakeholder (and vice versa)?

Examples: Retail, Face-to-Face, Internet, Phone, Mail, Transport

- Governance Stakeholder: Face-to-Face, Zoom-Call
- (PR) Users: Social Media, Internet, Journals
- Mouth-to-mouth propaganda
- Financiers: Face-to-Face, Zoom-Call
- Customer Acquisition: Face-to-Face (ring bell, conference, fair), Phone

ACTORS

Who and what may have an interest in the fact that this business exists?

From which groups or pools of Actors do the people come from who play the role of Stakeholders in this business?

Which individuals, groups or organizations does this business aim to reach and co-create value with to better meet those Actors Needs?

Examples: Humans, NGOs, Government, Media, other life and nature (usually represented by an NGO) etc.

- People who do not have an exist solar power system, who are grid connected, who have control over buildings with space (roof or balcony) & suitability for Photovoltaic System in EU - **<Need to estimate Total Addressable Market>**
- Nature

NEEDS

What fundamental Needs of the Actors is this business intending to satisfy or may hinder?

Guidance: For inspiration on possible Needs review Maslow's Hierarchy of Needs or Max-Neef's Fundamental Human Needs (preferred)

- **Top Need Buyers** Affordable & Reliable Electrical Energy
- **Nature:** Make sure that it doesn't harm me. It would be great if you support me.
- Financial Predictability
- Safety
- Control & Autonomy over Energy
- Simplicity (in acquisition, use, integration, and installation, upgade)
- Fast Repair / Good Service
- Increasingly healthy environment (lifecycle impacts)
- Esthetics

OUTCOMES

How does this business measure the Benefits and Costs to determine whether or not these outcomes are achieved (in applicable environmental, social and monetary units)?

COSTS

How does this business choose to measure the Costs incurred by its business model (Environmentally, Socially, Economically)?

- All three perspectives High economical benefit, and positive environmental and social impact
- Economical Costs:
  - Human Resource: Training
  - Materials
  - Manufacturing, etc.
  - IT-Infrastructure
  - Services: Mounting, Repair, etc.
- Environmental Costs:
  - Materials: Prioritize secondary materials. Virgin materials only when it is absolutely necessary. (Recyclate)
  - If virgin materials are used, Regeneration has to be planned
  - Overall impact shall at least be zero, ideally positive
  - No extra Land usage
  - [- Support Bio-diversity, Using plants, cooling benefit-> Energy saving]
  - lantern (in emergency situation)
- Social Costs:
  - Health & Safety (Green and reliable energy & work environment)
  - Equal payment, equal chances
  - Privacy
  - Supplier Relationship (ethical)
  - Society - Provide abundance in energy to reduce reliability on other countries
  - Prioritize Training and Hiring local employees

GOALS

What is this business's definition of success: environmentally, socially and economically?

What are the Goals that the Stakeholders have agreed align with the why/purpose/ vision they have chosen for this business (measured in appropriate units)?

- Challenges actual system in the market - cost of €10,000
- 200 New Customers per year
- Environmental (LCA) / CE Assessment - Bad - negative impact; Okay - Net Zero; Great - Positive Impact; Super Great - Increased Positive Impact (support biological ecosystems, green energy, etc.)
- Social (SLCA) - Ethical Mining, Ergonomic, Worker-friendly environment, Society Metrics?
- Goals that stakeholders agreed to alight with:
  - Reliable, Green Energy
  - Price
  - Environmentally friendly, No waste
  - Easy to use - Services: Mounting, Repair, Upgrade, etc.
  - App for the infrastructure, tracking, etc.
  - Secure & Safe

…ether this business has achieved …ders definition of success over time?

BENEFITS

How does this business choose to measure the Benefits that result from its business model (Environmentally, Socially, Economically)?

- Costs the Minus (-), benefits is when the costs are exceeded (+) Positive impact
